

Causal + Decision Intelligence Brief

Executive Summary

WorldCupROI has been upgraded from an ROI prediction workflow into a decision intelligence p

Recommended Sponsor Investment Logic

- Budget policy: under a 25M cap, expected portfolio ROI is 4.14x with risk-adjusted ROI 3.9
- Causal evidence: media_exposure has the strongest residualized effect signal (0.7113); tre
- Counterfactual risk: negative_news_shock has the lowest worst-case ROI (2.95x).
- Risk-sensitive pick: Brazil x Adidas leads after tail-risk adjustment.
- Future link: Brazil x Adidas is the top graph-learning future sponsor link.
- Funnel path: Brazil x Adidas has the strongest Exposure -> ROI path.

Operating Guidance

- Use optimization results to shortlist sponsor portfolios.
- Use causal inference to check whether exposure and player signals are decision evidence or
- Use counterfactual and tail-risk outputs before scaling spend.
- Use graph learning for future partnership discovery, not as a standalone investment decisi
